PROJECT

Automated Code Translator	Feb 2024 - June 2025
A code translator is a software tool that converts code written in one programming language into another while preserving functionality and logic. It enables developers to reuse code across platforms, modernize legacy applications, and simplify cross-platform development.	
<ul style="list-style-type: none">• Allow for code reuse across different platforms.• Enable cross-platform development• Aid in legacy code modernization• Enhance Developer productivity by automating syntax conversion.
